

REASONS WHY US CARGO™ ENCLOSED CARGO TRAILERS ARE A BETTER VALUE!

VISIT WWW.USCARGO.COM

Higher quality and superior performance per Dollar equals greater value for the money.

DryMax® Engineered Flooring.

All US Cargo enclosed cargo trailers come standard with a DryMax engineered floor for added value.

Superior quality -standard in every trailer.

- DryMax high performance engineered floor panels resist moisture and road chemicals -will not warp, swell or delaminate -won't absorb moisture.
- DryMax material is denser, stronger and stiffer than plywood- These tough panels are produced specifically for extended use under tough cargo trailer wear and tear. They look better and will last longer than other traditional flooring material.
- Engineered so panels stay flat straight and true.

DryMax and an integrated tongue -just two of the many value added features you can expect in every US Cargo enclosed cargo trailer

Our integrated tongue and frame ensure increased safety and towing characteristics greater strength and towing ease and convenience.

Frame Integrated Tongue.

US Cargo trailers are built with the tongue integrated into the frame for superior performance -standard.

Quality and value are built in.

- The integrated tongue makes the trailer all one level which lowers the trailers center of gravity for increased safety and better towing characteristics.
- Integrated tongue tubes are welded in more spots than under-slung for greater strength, less chance of breaking.
- Keeps the trailer at the same hitch level of the towing vehicle without the need for special hitch balls.

Customer satisfaction.

Why do we put so many top quality value added features in our enclosed cargo trailers? It is the goal of Forest River, Inc. that all US Cargo owners have a product experience and customer satisfaction that meets or exceeds their expectations- every time.

Quality and value are standard features in all our trailers because customer satisfaction is our top priority.

NEW GENERATION LED LIGHTS

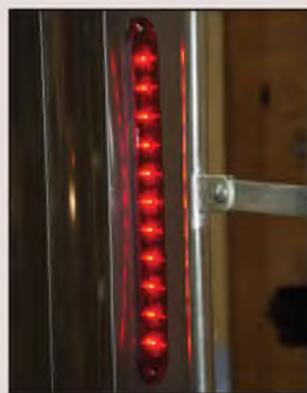

Our standard exterior and interior lights are now all 3rd generation LED lights-engineered for superior performance. These surface mounted LEDs are smaller and more robust while being much brighter and efficient.

Made from solid state construction with no moving parts, our LEDs utilize an electric chip encapsulated in a urethane substrate that is much better than epoxy which can get brittle and crack in cold temperatures, losing electrical connection. Urethane is flexible in temperature extremes ensuring a dependable light every time. LED lights have a great advantage over inferior incandescent lights because they:

- are more energy efficient
- require less AMP draw- generate very little heat.
- provide instantaneous and brighter illumination
- have an average life of 100,000 hours compared to 3,000 hours for incandescent lights

Highest Quality Components- Greater Value

- Auto grade polycarbonate lenses are stronger and brighter than inferior components.
- FR4 Military grade circuit boards (no paper or cardboard)
- Vacuum tested sonic welds assures highest quality
- American made, comes with manufacturer's LIFETIME limited warranty.

LED Strip Tail Lights for super visibility and safety -standard

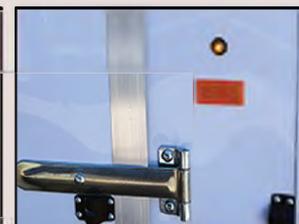

LED Bullet Running Lights at all four corners plus front clearance lights -standard.

LED interior wall and ceiling mounted, super bright- standard.

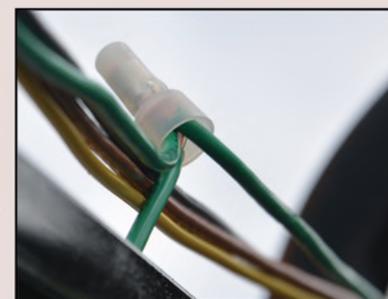

LED Bullet rear header clearance lights -standard

LED clearance bullet on side.

"Crimp Cap" Electrical Connectors -standard.

Instead of inferior Scotch Locks we use bell shaped "crimp caps" which are much more reliable and keep a more secure electrical connection longer.

Don't put up with the inconvenience and frustration of inferior Scotch Locks-US Cargo adds value

HIGH PERFORMANCE THREE PART PAINT PROCESS AND UNDERCOAT

Before painting, all our steel frames and chassis undergo a thorough phosphate bath to be sure the steel is clean and free of any dirt or oil and prepare the frame for paint.

A standard feature on all our trailers to prolong the life of your valuable investment to keep it looking great even after many years of hard work.

1. We follow the phosphate preparation with a coat of primer before painting. If the paint is scratched during hard usage, the primer will still protect the frame from rust until it can be touched up. Powder coating can chip and crack off and leave bare metal exposed to conditions that will cause rusting.
2. After the primer an additional coat of quality paint is applied to the entire chassis and all exposed metal.
3. Finally the entire chassis receives an application of Z Tech high performance rust prevention coating for un-

paralleled protection for your investment. We extend the Z Tech industrial coating application another foot up the post uprights for additional protection.

After priming comes the paint application then finally the Z Tech protective coating.

The paint process begins with preparing and cleaning the chassis and frame.

Seven Way Electrical Wire Loom-standard.

We protect electrical wiring wherever it passes through metal with either a rubber grommet or generous use of 7 Way Electrical Wire Loom to ensure hassle free long use with minimal maintenance.

Quality, innovation, and value are standard features on all US Cargo, Haulin, and AmeraLite enclosed cargo trailers.

2 Ply Steel Belted Bias Tires

2 ply steel belted bias is our standard tire. Arisun steel belted bias tires are exclusive to Forest River Inc.

Steel belted bias design uses two steel belt layers under the tread. This reinforced construction protects against damage from road heat buildup, gives additional support plus a more rigid inner material which bonds with the tread.

- Improved tire tracking plus increased performance and safety characteristics.
- Higher resistance to tread wear and road heat buildup from rolling friction - 6 times longer life.
- Smoother ride and reduced rolling resistance makes for increased fuel efficiency.
- Comes with 24/7 emergency roadside assistance.

Increased Safety & Performance

Tires ship nitro filled, standard. Tires lose air pressure naturally through a process of permeation. "Plain air" filled tires can lose 1-3 lb. of pressure in a month -more during warm weather. Nitrogen has larger molecules 3-4 times less likely to escape.

- With correct tire pressure, ensures fuel efficiency
- Oxygen causes oxidation which makes rubber brittle causing it to lose tensile strength. At high temperature and pressure oxygen reacts to and damages inner tire liners and belt packages; Nitrogen does not.
- Increased safety -properly inflated tires are safer. Under-inflated tires cause 90% of blowouts. Nitrogen provides more reliable pressure with less risk of blowouts.

Cross section of our standard tire shows the 2 ply steel belts and thicker tread.

Powder Coated Silver Mod Wheels

Standard on every model, are of heavier construction, look great and provide increased corrosion protection. With other manufacturers these would be upgrades.

Higher quality and superior performance per dollar equals greater value for the money.

Super Lock Exterior System

Our Unique, Super Lock Exterior System, standard on every model, features a durable, great looking, smooth aluminum exterior that looks clean and uncluttered with screws which are susceptible to rust and corrosion.

Super Lock Adds Value:

- Exterior panels are securely locked together and mechanically fastened (hidden) to the upright posts.
- On the seams the Super Lock system features 4 layers of roll-formed aluminum that inter-lock into place. (Others have only 2 layers that overlap leaving exposed, unpainted edges where paint starts to peel) Super Lock has no exposed unpainted edges because they are inner-locked together. Best of all, there are no screws exposed to the weather so there will be no rust and unsightly stains running down the side.
- In addition to being mechanically secured to the uprights, each aluminum exterior panel is glued in place with a polyurethane non-solvent, adhesive. Aluminum and steel corrode when in contact but our environmentally friendly adhesive provides a barrier between them to prevent a corrosive reaction. They also expand and contract at different thermal coefficients during temperature changes which can break the bond of VHB tape or 2- part glue on some trailers. Our glue dries to a stable, flexible, rubber-like property allowing it to expand and contract along with the metal so the bond remains strong and secure.
- The system allows for additional trailer height without the need for screws.
- Standard colors- black, white or pewter. A variety of great optional colors are available as well.

The Super Lock exterior system, a standard on all US Cargo, Haulin, and AmeraLite enclosed trailers has a much cleaner looking, flat aluminum surface uncluttered with screws. Super Lock has 4 layers of interlocking roll-formed aluminum instead of the 2 overlapping layers with an exposed unpainted edge on some other trailers.

3" Aluminum Trim

Now standard on every model for great looking, heavier construction and increased protection from corrosion. Another value added feature on all US Cargo and Haulin models.

REASONS WHY AMERALITE™ ENCLOSED CARGO TRAILERS ARE A BETTER VALUE!

Higher quality and superior performance per dollar equals greater value for the money.

DOUBLE AUTOMOTIVE BULB SEALS

We listened when consumers told us that concern over dirt and moisture getting into their trailer was a big issue for them. Now the value added double bulb seal is standard.

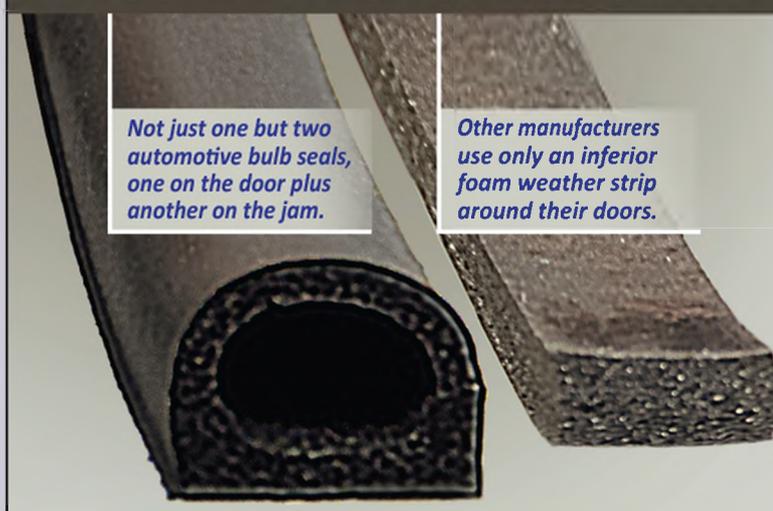

Whether you're hauling cargo or storing it you can be certain that our Double Automotive Bulb Seal effectively locks out moisture, dust and road grime for maximum protection.

- Each door is double sealed with a bulb seal -just like on your car- on both jam and door for even more protection.
- We designed the system so that, when the door is closed, the bulb seal compresses against the engineered, raised lip on the aluminum "z" piece of the jam and door creating an impassable barrier locking out dust and moisture.
- Closed cell EPDM rubber seal is far more effective than weather strip used by other manufacturers- lasts longer too.
- Every unit is tested in our simulated precipitation "rain booth" before delivery to ensure there are no leaks.

Our Value Added Higher Quality Standard Components Set Us Apart.

DOUBLE SEALED AGAINST DUST, DIRT AND MOISTURE - BETTER VALUE!

Our exceptional quality standard features mean you can protect, store and haul cargo with greater confidence with US Cargo enclosed trailers. That's real value!

One Automotive Bulb Seal Around The Door... Plus Another Around The Jam For Double Protection
